DETAILED ACTION

Response to Remarks

1. The applicant has amended the specification to address the arrangement of specification issue asserted in the previous action.
2. Claims 1-4 and 6-13 were indicated as allowable and remain in allowable form.
3. Claims 5 and 14 are cancelled.

EXAMINER'S AMENDMENT

4. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Aaron A. Fishman (Reg. No. 44,682) on 6/18/09.

5. The claims are to be amended as follows:

Claim 13, line 4: after "1 to 4", delete "and", insert in its place - - , - -.

So that the amended claim 13 should recite:

A hearing system comprising an ear device with an output electrical to mechanical converter and with a wireless receiver, the output thereof being operationally connected to said electrical to mechanical converter; a wireless transmitter according to one of the claims 1 to 4, 6 to 12, a signal transmitted from said wireless transmitter being received and demodulated at said ear device and acting on said electrical to mechanical converter.

Allowable Subject Matter

6. Claims 1-4 and 6-13 contain allowable subject matter.

The following is a statement of reasons for the indication of allowable subject matter:

Prior art Kuznicki et al. (US 4,972,439) Regarding claim 1, Kuznicki discloses a wireless transmitter (transmitter illustrated in Figure 3) comprising:

An antenna (Figure 3);

A transmitter signal generator unit generating a signal to be transmitted at an output and having a control input, a control signal applied to said control input controlling at least one of a frequency band and of a power level of said signal to be transmitted (216 is the transmitter signal generator; Kuznicki discloses a decoder whose output controls the frequency or power selection (Figure 3; column 5, lines 45-55); said output of said generation being operationally connected to said antenna (Figure 3); an audio signal/control signal decoder unit (decoder 208 outputs signals that control the frequency or power selection, a channel select signal and a power control signal of which either can read on control signal, column 5, lines 45-55; column 8, lines 47-57), said decoder unit generating said control signal at an output of said decoder unit in response to an encoded audio signal at an input of said decoder unit (the signal that is input into the decoder is an encoded audio signal, Figure 1 shows that the signal input into the transmitter illustrated in Figure 3 comes from a telephone source and also the telephone signal is processed through a modem which transmits digital data over telephone by modulating the data into an audio signal, therefore the decoder outputs in

Art Unit: 2614

response to an encoded signal; column 5, lines 35-43;); said output of said decoder unit being operationally connected to said control input of said generator unit (Figure 3; column 5, lines 45-55); a modulator unit (212, Figure 3; column 5, line 59-column 6, line 10) with a carrier frequency signal input and an output (Figure 3; column 6, lines 12-25), the output of the modulator unit being operationally connected to said output of said generator unit and having a modulation input, said modulation input being operationally connected to said input for said encoded audio signal (the modulator is operationally connected to the output of the transmitter and to the telephone signal which is the input signal (Figures 1 and 3; column 2, lines 55-67;column 5, lines 45-55). Prior art Mathieu et al. (US 5,852,636) discloses a transmitter that includes a modulator (Figure 1, transmitter 10 includes modulator 20; column 5, lines 8-10).

The prior art or combination thereof fails to disclose or make obvious the invention as a whole particularly said input of said decoder unit being operationally connected to said output of said generator unit, via said modulation input, for wirelessly transmitting audio content of said encoded audio signal in light of the rest of the claim.

Claims 2-4,6-13 are allowed due to dependency on claim 1.
